

ABOUT GLIDEPATH

GlidePath develops, owns and operates next generation clean power projects—including battery storage, solar and wind. Our experienced team is working to build the clean and reliable energy systems we need to power the future.

When we develop new projects, we prioritize communication and flexibility to ensure that our facilities benefit the local community.

We are among the leading companies using distributed generation and battery storage to increase energy security while reducing pollution and lowering energy costs.

GlidePath has offices in Illinois and Minnesota and an operates clean energy operates a portfolio of more than 400 MW of storage, solar and wind energy projects across the U.S.
